Reference Ranges

PCR Molecular detection of Corona SARS-CoV-2 - (24h) Families/Groups In the submitted sample specific sequence for presence of Corona CoV-2 is NOT DETECTED

(ENG):The variable incubation period following exposure to the virus is 14 days and longer, which is why false negative results are possible. If symptoms occur in patients without clinical indication, it is recommended to repeat the test. For counselling or further treatment, you can refer to our infectious disease specialist. (МК):Варијабилниот период на инкубација по контакт со вирусот е 14 и повеќе дена, поради што се можни и лажно негативни наоди. Доколку кај пациентите без клиничка слика се појават симптоми, се препорачува повторување на тестот. Интерпретацијата на наодот ја врши микробиолог, за советување и понатамошно ординирање може да се обратите кај нашиот инфектолог.
